Stationary ram hoist for grease with bedplate, consisting of a special pump lifting device suitable for pneumatic piston grease pumps, and a grease compacting system that works based on a pneumatic circuit which is activated by a control valve.

This unit is used when the grease has a high degree of viscosity or is very dense due to low temperature and therefore is difficult to pump. Suitable for the use with all grease pump models of series standard, TWDE and IFP (except art.no. 4043).

In the standard version the kit includes a pneumatic 50:1 – grease pump of the standard series.

On demand also available with other pump models.

Versions for the use with pails and drums are available.
